SUBJECT INDEX

Cosmology

A critique of Rees's theory of primordial gravitational radiation, *J. C. Jackson* 1P

Galaxies

On the distribution of angular momenta of galaxies, *Michael Reinhardt* 151
Radio maps of 31 extragalactic sources at 2·7 and 5·0 GHz, *N. J. B. A. Branson, B. Elsmore, G. G. Pooley and M. Ryle* 377
A critique of Rees's theory of primordial gravitational radiation, *J. C. Jackson* 1P
Low frequency, high resolution observations of Virgo A, *P. N. Wilkinson and R. J. Peckham* 7P

Gas dynamics

Fluid dynamic stability of double radio sources, *G. M. Blake* 67
A numerical study of the dynamics of H II regions, *J. G. Hill and M C. Marsh* 189
Stability of a uniform, non-rotating spheroid collapsing under its own gravitation, *S. A. E. G. Falle* 265
The collapse of a rotating cloud, *Richard B. Larson* 437

General relativity

A critique of Rees's theory of primordial gravitational radiation, *J. C. Jackson* 1P

Interstellar matter

A numerical study of the dynamics of H II regions, *J. G. Hill and M. C. Marsh* 189
Physical conditions in interstellar hydroxyl and formaldehyde clouds, *R. D. Davies and H. E. Matthews* 253
Stability of a uniform, non-rotating spheroid collapsing under its own gravitation, *S. A. E. G. Falle* 265
The collapse of a rotating cloud, *Richard B. Larson* 437

Nebulae, planetary

The ionization structure of planetary nebulae—IX. Luminous filaments, *David Van Blerkom and Thomas T. Arny* 91

Physical processes

The internal dynamics of the oblique rotator, *L. Mestel and H. S. Takhar* 419

PAGE

Pulsars

Improved data for eight Molonglo pulsars, *A. E. Vaughan and M. I. Large* 25P
Discovery of three pulsars, *A. E. Vaughan and M. I. Large* 27P

Radio astronomy

Fan-beam surveys of radio sources near declinations +28° and +41°, *M. A. G. Willson* ... 7
Fluid dynamic stability of double radio sources, *G. M. Blake* 67
Radio-echo observations of the major night-time meteor streams—III. Quadrantids, *L. M. G. Poole, David W. Hughes and T. R. Kaiser* 223
Physical conditions in interstellar hydroxyl and formaldehyde clouds, *R. D. Davies and H. E. Matthews* 253
The polarization of radio sources with appreciable redshift, *P. P. Kronberg, R. G. Conway and J. A. Gilbert* 275
Radio maps of 31 extraglactic sources at 2·7 and 5·0 GHz, *N. J. B. A. Branson, B. Elsmore, G. G. Pooley and M. Ryle* 377
Identification of 5C4 radio sources, *C. Barbieri and F. Bertola* 399
Low frequency, high resolution observations of Virgo A, *P. N. Wilkinson and R. J. Peckham* 7P
Improved data for eight Molonglo pulsars, *A. E. Vaughan and M. I. Large* 25P
Discovery of three pulsars, *A. E. Vaughan and M. I. Large* 27P

Solar system

Radio-echo observations of the major night-time meteor streams—III. Quadrantids, *L. M. G. Poole, David W. Hughes and T. R. Kaiser* 223
The detection of shower structure in the sporadic meteor background, *L. M. G. Poole and T. R. Kaiser* 283

Star clusters

The globular cluster NGC 4833, *John Menzies* 207
Electronographic photometry of star clusters in the Magellanic Clouds—III. The colour–magnitude diagram of NGC 2257, *Merle F. Walker* 459

Stars, atmospheres of

A note on circulation currents in differentially rotating stellar envelopes, *D. Brand* 325

Stars, binary

A model for the totally eclipsing W Ursae Majoris system AW UMa, *S. W. Mochnacki and N. A. Doughty* 51
Contact binary systems: why the secondary might be hotter, *J. A. J. Whelan* 115
The short period light and velocity variations in Alpha Virginis, *R. R. Shobbrook, N. R. Lomb and D. Herbison-Evans* 165
Models for five W Ursae Majoris systems, *S. W. Mochnacki and N. A. Doughty* 243
A photometric study of the eclipsing binary AS Cam, *R. W. Hilditch* (Summary of *Memoirs* 76 Part 1) 471

Stars, chemical composition

The (0, 0) band of the γ-system of TiO in the umbral spectrum: the isotopic abundances of Ti, *D. L. Lambert and E. A. Mallia* 337
The composition of the subdwarf Groombridge 1830, *J. Tomkin* 349
The influence of lines of various metals on the solar colours, *R. A. Bell* 13P

Stars, magnetic

The internal dynamics of the oblique rotator, *L. Mestel and H. S. Takhar* 419

Stars, photometry of

Three-colour photometry of DY Pegasi, *Brian Warner and R. Edward Nather* 315
Three-colour photometry of CY Aquarii, *R. Edward Nather and Brian Warner* 321
Electronographic photometry of star clusters in the Magellanic Clouds—III. The colour–magnitude diagram of NGC 2257, *Merle F. Walker* 459

Stars, rotation of

A note on circulation currents in differentially rotating stellar envelopes, *D. Brand* 325
The internal dynamics of the oblique rotator, *L. Mestel and H. S. Takhar* 419

PAGE

Stars, structure and evolution

Contact-binary systems: why the secondary might be hotter, *J. A. J. Whelan* 115
Evolutionary aspects of the Cepheid stage, *K. J. Fricke and P. A. Strittmatter* 129
Uncertainties in the observable properties of lower main sequence stellar models, *D. L. Moss* 291
Composition changes during stellar evolution, *Peter P. Eggleton* 361
Pulsating helium stars, *Virginia Trimble* 411

Stars, variable

Observations of rapid blue variables—III. HL Tau-76, *Brian Warner and R. Edward Nather* 1
A model for the totally eclipsing W Ursae Majoris system AW UMa, *S. W. Mochnacki and N. A. Doughty* 51
Observations of three short period RR Lyrae variables, *Margaret J. Penston* 103
Contact binary systems: why the secondary might be hotter, *J. A. J. Whelan* 115
Evolutionary aspects of the Cepheid stage, *K. J. Fricke and P. A. Strittmatter* 129
The short period light and velocity variations in Alpha Virginis, *R. R. Shobbrook, N. R. Lomb and D. Herbison-Evans* 165
Two new broad-lined Beta Canis Majoris stars, *R. R. Shobbrook and N. R. Lomb* 181
Models for five W Ursae Majoris systems, *S. W. Mochnacki and N. A. Doughty* 243
Observations of rapid blue variables—IV. WZ Sge, *Brian Warner and R. Edward Nather* ... 297
Observations of rapid blue variables—V. VV Puppis, *Brian Warner and R. Edward Nather* ... 305
Three-colour photometry of DY Pegasi, *Brian Warner and R. Edward Nather* 315
Three-colour photometry of CY Aquarii, *R. Edward Nather and Brian Warner* 321
Pulsating helium stars, *Virginia Trimble* 411
A photometric study of the eclipsing binary AS Cam, *R. W. Hilditch* (Summary of *Memoirs* 76, Part 1). 471

Sun

The (0, 0) band of the γ-system of TiO in the unbral spectrum: the isotopic abundances of Ti, *D. L. Lambert and E. A. Mallia* 337
The influence of lines of various metals on the solar colours, *R. A. Bell* 13P
